## Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

### CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200) or to the Statistics Canada reference centre in:

St. John's (772-4073)	Sturgeon Falls (753-4888)
Halifax (426-5331)	Winnipeg (949-4020)
Montreal (283-5725)	Regina (359-5405)
Ottawa (990-8116)	Edmonton (420-3027)
Toronto (966-6586)	Vancouver (666-3691)

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

## Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

*CANSIM Main Base Series Directory* — \$60.

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

*CANSIM Mini Base Series Directory*, Catalogue 12-569 — \$16.70 Canada, \$20 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

*CANSIM-Cross Classified Data Base Index* — \$7.

This index provides a summary of available data on the Cross Classified Data Base.

*CANSIM-Cross Classified Data Base Directory* — \$20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

## Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

- J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
- R.E. Drover — Director, Corporate Assignments Division
- B.J. Lynch — Director General, Operations Branch
- R. Platek — Director, Methodology Division
- M. Podehl — Director, CANSIM Division
- G.J. Brackstone — Director General, Methodology Branch

- A. Meguerditchian — Director, Financial Flows and Multinational Enterprises Division
- L.O. Stone — Senior Advisor, Population Studies and Statistics
- P.N. Triandafillou — Director, Industry Product Division
- K. Lal — Acting Director General, System of National Accounts Branch
- D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

## Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation,

are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

# The Family Life Cycle and Housing Consumption in Canada: A Review Based on 1981 Census Data

\*G.E. Priest

## Introduction

Studies of relationships between human groups and their socio-economic status and behaviour have become increasingly narrow in focus. Analysis has shifted from the household or the extended family to the nuclear family or even to specific stages in the family life cycle. The latter approach can be particularly insightful, especially if it also incorporates the age of the wife or lone parent.

The family life cycle concept implies that families are formed through the union of a husband and wife, that they then expand as children are born, and then eventually contract as children begin to leave home. Finally, the husband and wife are left at the empty-nest stage. The concept is "normative" in its assumption that all families pass through all stages. In reality many families may "begin" by a woman having a child out of wedlock or outside of an established union. Other families dissolve long before the empty-nest stage due to death, separation or divorce. Some of these become lone-parent families as in the case of one spouse departing, leaving the other to raise the children alone. Still other families remain childless.

Even though many individuals or families may not pass sequentially through the normative cycle, the concept is useful in terms of identifying the number of families and their characteristics that may be found in any given stage at a specific point in time. The 1981 Census of Canada classified families into what was called census family structure which approximates both "normative" and "innovative" stages in the

family life cycle. Linked with housing data, such as type of dwelling as well as with income and shelter expenditures, the family life cycle concept reflects considerable variation in housing consumption between the various types of families.

This paper examines relationships between the family life cycle (census family structure) and the type of dwelling occupied, tenure, housing conditions, size of dwelling, family income and shelter expenditure.

Some of the highlights of this examination reveal that:

- young female lone-parent families generally occupy rental housing, which is small in size, in poor condition and requires excessive proportions of their income in monthly shelter payments;
- just under 960,000 Canadian families spend 30% or more of their income on shelter;
- more than 375,000 Canadian families spend 50% or more of their income on shelter;
- there are over 680,000 children in families which pay more than one-half of their income on shelter costs;
- older families, particularly those who have remained childless or are in the "empty-nest" stage, who own their homes pay relatively low shelter expenditures compared to other families.

---

\*G.E. Priest is the Director of the Housing Family and Social Statistics Division.

## Census Family Structure

Table 1 shows a number of families by family structure based upon the life cycle concept and the age of the wife or lone parent as well as average family size and average number of children. For the purpose of this presentation where family data are linked to housing data, the family universe is restricted to those families who are responsible for paying basic expenses for their own dwellings (for example, the rent, or mortgage, or taxes, or electricity) and have no additional persons such as lodgers or extended family members living with them.<sup>1</sup> Families are divided into two basic types, husband and wife and lone-parent. The latter are further divided into those with male parents and those with female parents. The former are subdivided into "childless" (in which there are no children present and the wife has never borne children), "empty-nest" (in which the wife has borne children but they are no longer living at home) and "with children" (in which there are currently children in the home).

Nine out of ten of these families are husband-wife families while the balance are lone-parent families. Of the total families (husband-wife and lone-parent), 67.7% are actively involved in child-rearing, 17.2% are at the empty-nest stage and 15.1% are childless. In seven out of ten of the childless families the wife is less than 35 years and, therefore, likely to still have children. The largest families, are of course, those with children and in which the wife is 35-44 years. Generally, for this group, childbearing has been completed but older children have not yet started to leave home.

Further examination of Table 1 indicates that some families may be considered anomalies. For example, there are 31,070 empty-nest families in which the wife is less than 35 years (and a further 35,080 with the wife 35-44 years). It is extremely unlikely that many of the children of these relatively young women would have grown up and left home to become independent. It is more probable that these are families in which the children are deceased, in foster homes or reside with parents of former unions. Another anomaly is the family in which the wife or lone parent is 55 years and over and there are still "children" at home. This is due to the census definition which includes any never-married person living with his or her parent or parents as a "child" in a census family. There are 431,765 such families comprised of older parents and largely adult "children". The following anomalies are excluded from tables in the remainder of the text:

- husband-wife, empty-nest, wife less than 35 years;
- husband-wife, empty-nest, wife 35-44 years;
- husband-wife, with children, wife more than 55 years;
- male lone-parent, parent more than 55 years;
- female lone-parent, parent more than 55 years.

The presentation of tabular material in the balance of the text also makes a distinction between "normative" and "innovative" families. Normative families are simply defined as those which adhere to the family life cycle model of family formation, growth, decline and empty-nest. Innovative families are seen as those which fall outside the model. That is, they remain childless or they consist of a lone parent.

## Family Structure and Type of Dwelling

Steele<sup>2</sup> has hypothesized that families with children prefer low density detached or semi-detached accommodation with ground level access to private outdoor space. This type of housing is seldom available on the rental market. If a family has the economic means they will switch from renting to owning in order to acquire the desired configuration.

If single-detached dwellings are seen as the ideal for families with children, Figure 1 shows that that goal is most likely to be realized by older families. For example, 65.0% of the husband-wife families with children, in which the wife is less than 35 years, live in single-detached dwellings. This increases to 77.5% for families with children where the wife is 35-44 years, and to 78.5% where the wife is 45-54 years. Female lone-parent families have the lowest occupation rates for single-detached dwellings, especially where the parent is less than 35 years (23.3%). Although empty-nest families no longer "need" the housing attributes they sought when they had children, it is interesting to note that 71.7% of them (wife is 45-54 years) continued to occupy single-detached dwellings compared to 61.0% of those in the same age group who remained childless.

For the normative families, the occupancy rate for high-rise apartments is at its highest for the young, childless couple (wife is under 35 years) at 46.6%. This falls to 31.8% for the young husband-wife family with children and falls further to 20.7% and 19.5% for families with children with the wives 35-44 years and 45-54 years respectively. Apartment living then increases marginally for the empty-nest families.

<sup>1</sup> Family is defined here as a husband and wife with or without never-married children living with them or a lone parent with at least one never-married child.

Table 1. Family Structure of Families Responsible for Paying the Basic Expenses for Their Own Dwellings by Average Size and Average Number of Children, Canada, 1981

Family structure	Number of families	% Total families	Average size	Average number of children
Husband-wife with children	3,266,570	58.0	4.1	2.1
Wife aged <35	1,370,880	24.3	3.9	1.9
Wife aged 35-44	983,556	17.5	4.4	2.2
Wife aged 45-54	629,290	11.2	4.1	2.1
Wife aged 55+	282,845	5.0	3.5	1.5
Husband-wife, childless	850,570	15.1	2.0	0
Wife aged <35	597,905	10.6	2.0	0
Wife aged 35-44	65,435	1.2	2.0	0
Wife aged 45-54	51,180	0.9	2.0	0
Wife aged 55+	136,050	2.4	2.0	0
Husband-wife, empty-nest	967,870	17.2	2.0	0
Wife aged <35	31,070	0.6	2.0	0
Wife aged 35-44	35,080	0.6	2.0	0
Wife aged 45-54	183,290	3.3	2.0	0
Wife aged 55+	718,435	12.8	2.0	0
Male lone-parent	82,785	1.5	2.6	1.6
Parent aged <35	7,815	0.1	2.6	1.6
Parent aged 35-44	21,270	0.4	2.8	1.8
Parent aged 45-54	24,505	0.4	2.8	1.8
Parent aged 55+	29,190	0.5	2.4	1.4
Female lone-parent	464,415	8.2	2.7	1.7
Parent aged <35	139,120	2.5	2.7	1.7
Parent aged 35-44	113,025	2.0	3.1	2.1
Parent aged 45-54	92,550	1.6	2.9	1.9
Parent aged 55+	119,730	2.1	2.3	1.3
Total families	5,632,210	100.0	3.3	-
Wife or parent aged <35	2,146,785	-	3.3	-
Wife or parent aged 35-44	1,218,370	-	4.1	-
Wife or parent aged 45-54	980,810	-	3.4	-
Wife or parent aged 55+	1,286,250	-	2.4	-

Figure 1  
 Distribution of Selected Families by Structure, Showing Percentage Occupying Specified Dwelling Types, Canada, 1981

The innovative families always retain higher apartment occupancy rates for any given age group. For example, couples who remain childless have higher rates than either empty-nest families or families with children. The highest rates, however, are maintained by the lone-parent families, particularly the female lone parent less than 35 years where over 66% live in apartments. Very few of these families, therefore, would seem to be realizing the goal of ground level access to private outdoor space for their children.

## Tenure

The tenure status of families is reflected in Figure 2 where it is seen that there is a close relationship between tenure and type of dwelling. For example, 42.6% of the young childless families (wife less than 35 years) live in single-detached dwellings and 42.8% live in owned dwellings. This would seem to support the premise that single-detached dwellings are not generally available on the rental market. For normative families ownership peaks for older families with children at 87.5% (wife 45-54 years) and then falls off for empty-nest families. Ownership rates for the innovative childless families remain relatively consistent at just over 70% regardless of the age of the wife.

Noteworthy are the very low rates of ownership for the female lone-parent families, especially those with young parents (less than 35 years) which stand at only 16.5%. In other words, 83.5% of these young families are tenants rather than owners.

Thus it is seen that a number of factors appear to be related to a family's choice of type of dwelling and tenure including presence of children, presence of a spouse, and the age of the wife or parent.

## Housing Conditions

For the most part Canadian dwellings are in good condition. In 1981, close to 77% of all households reported that their dwellings needed only regular maintenance. Close to 17% reported that their dwellings needed minor repairs while just over 6% reported that their dwellings were in need of major repairs. As seen in Figure 3, older childless families and families at the empty-nest stage have the highest rates of dwellings in good condition, and conversely, the lowest rates of dwellings in need of repairs.

Husband-wife childless families in which the wife is 55 years and over are the best housed with 83.1% of their dwellings in good condition. Only 12.3% are in need of minor repairs and 4.6% in need of major repairs.

For families with children, including both husband-wife and lone-parent, there is a consistent pattern with

regard to housing conditions. It seems that the best housed families, of any given structure, are always in the ages 35-44 years. Clearly, for some reason, both younger families and older families with children have the highest rates of dwellings in need of repairs. However, lone-parent families have considerably higher rates of dwellings in need of repairs than husband-wife families. In fact, young lone-parent families have the highest rates of dwellings in poor condition (31.6% for male lone parents less than 35 years and 32.1% for female lone parents in the same age group). Young male lone parents have the highest rate of dwellings in need of minor repair (23.3%) while female lone parents of all ages have the highest rates of dwellings in need of major repair (as high as 11.0% for females less than 35 years).

## Size of Dwelling

The census provides a rather crude measure of the size of dwellings in that only a count of rooms is provided rather than the actual physical dimensions of living space in terms of square feet or square metres. Nevertheless, even this albeit crude measure indicates that generally the younger the family, the fewer the rooms they occupy. For families with children, both lone-parent and husband-wife, the maximum space occupied occurs for the age group 45-54. There are significant differences between the various family structures, however. For example, young husband-wife families (wife less than 35 years) with children occupy an average of 6.2 rooms, while male lone parents in the same age group occupy 5.4 and female lone parents 4.9.

Empty-nest families occupy more space than childless families in the same age groups indicating a possible tendency to stay on in larger family homes after the children have left. The reason for this apparent over-consumption of housing may be due to a number of factors including familiarity with neighbourhood, economic security, desirability of having space available if children or grandchildren come to visit or it may simply be a matter of inertia.

To summarize to this point, the largest families occur in the 35-44 year age group. This is also the age group which has the highest occupancy rate of dwellings in good condition. However, the highest occupancy rates for single-detached dwellings, owned dwellings and dwellings with the greatest number of rooms generally occur for families in the age group 45-54. While it would appear that the greatest "need" for the maximum in accommodation occurs in the age group 35-44, apparently that need is not met until families reach the 45-54 year age group, when families are already starting to contract due to the depar-

Figure 4  
 Distribution of Selected Families by Structure, Showing Average Number  
 of Rooms in Dwellings, Canada, 1981

ture of adult children. This lag is probably due in large part to factors related to income and shelter expenditures.

### Family Income

Family income can be examined from two perspectives — total income or per capita income. The latter, while based upon total income earned by the family, takes into account the number of persons in the family. For example, for husband-wife families, where the wife is 45-54 years, the total average family income was \$37,304 in 1980. The per capita income, however, was only \$9,125, considerably less than the \$14,022 of the empty-nest families in the same age group. If one's interest is in the purchasing power of families then the total income is the better figure. If, on the other hand, the interest is in the number of people a family's income has to support, then per capita income may be a more useful measure. The following presentation examines per capita income in comparing the incomes of the various families but uses total income in calculating shelter cost to income relationships.

Generally, family income increases with age. This is due to a number of factors including increased income potential due to longer experience in the labour force, wives returning to the labour force with increasing independence of older children and, to a certain degree, contributions of older children who may be working part-time or even working full-time but still living at home. The different family structures, however, display very different patterns of per capita income as seen in Figure 5.

For example, the husband-wife childless family with the wife aged less than 35 had a per capita income of \$13,461 in 1980. Families who have remained childless had peak earnings of \$17,487 for the age group 35-44 which was an exception compared to all other families where earnings peaked for the 45-54 year age group. However, even the latter group of childless families, at \$14,864, had a higher per capita income than any other family. Empty-nest families had the next highest per capita incomes (\$14,022 for the 45-54 year age group). It is probable that the childless families have the higher incomes because the wife is more likely to have more labour force experience (and hence a higher potential income) than a wife who has taken time out of the labour force to raise children.

Young families, where the wife or parent is aged less than 35, show great discrepancies in income. As noted above, the husband-wife childless families had a per capita income of \$13,461 but the husband-wife

family with children had less than half that amount at \$6,511. This was even less than male lone-parent families in the same age group who had \$6,978 per capita. An important distinction, however, is that the husband-wife family has the option of one parent staying home with young children or arranging for day care while both parents work. The lone-parent family, on the other hand, does not have such an option. If the parent wishes to work then some kind of day care arrangement must be made and the cost must be borne. This may be a factor in the alarmingly low per capita incomes of young female lone-parent families where the 1980 income was a mere \$2,904 which was less than half that of other young families with children and less than one-quarter that of the young childless families.

These striking differences demand a look at labour force participation rates which are shown in Tables 2 and 3. Young husbands and male lone parents show marginal differences in both participation rates and employment rates. For example, participation rates for husbands, with and without children are exactly the same at 96.9% although employment rates are slightly higher for husbands with children. Male lone parents have slightly lower rates for both participation and employment at 91.5% and 82.1% respectively. A very different picture emerges for young wives and female lone parents where the participation rates stand at 88.0% for those in childless families but falls to 51.6% for husband-wife families with children. It stands at 58.7% for female lone parents who have an employment rate of 50.0%. Table 4 shows a comparative employment rate of families that have at least one spouse or lone parent employed. In effect, 97.1% of the young childless couples have a breadwinner which drops to 94.9% for the couple with children to 82.1% for the young male lone-parent families, to 50.0% for young female lone-parent families.

Figure 6 provides some further comparisons of husband-wife and lone-parent families of broader age groups in terms of labour force and employment activity. In husband-wife childless families with the wife less than 35 years, both the husband and the wife are employed in 75.6% of the cases. In 10.3% of these families the husband is employed but the wife is not in the labour force. The balance of the families (14.1%) involve various combinations of husbands and wives employed, unemployed, or not in the labour force. By comparison, families in the same age group, with children, have only 43.7% of their number with both husband and wife employed. An almost equal proportion have the husband employed but the wife not in the labour force. For the age group 35-44, however, 53.9% of the husband-wife families, with

Figure 5

Family structure	Participation rate %	Employment rate %
Wives in husband-wife childless families, wife <35	88.0	81.0
Wives in husband-wife families with children, wife <35	51.6	46.1
Female lone parents	58.7	50.0

Employment rates for the purpose of this report are based upon the total population in question rather than the population in the labour force.

Table 4. Families by Selected Family Structures, Showing Percent that Have a Lone Parent or One or Both Spouses Employed, Canada, 1981

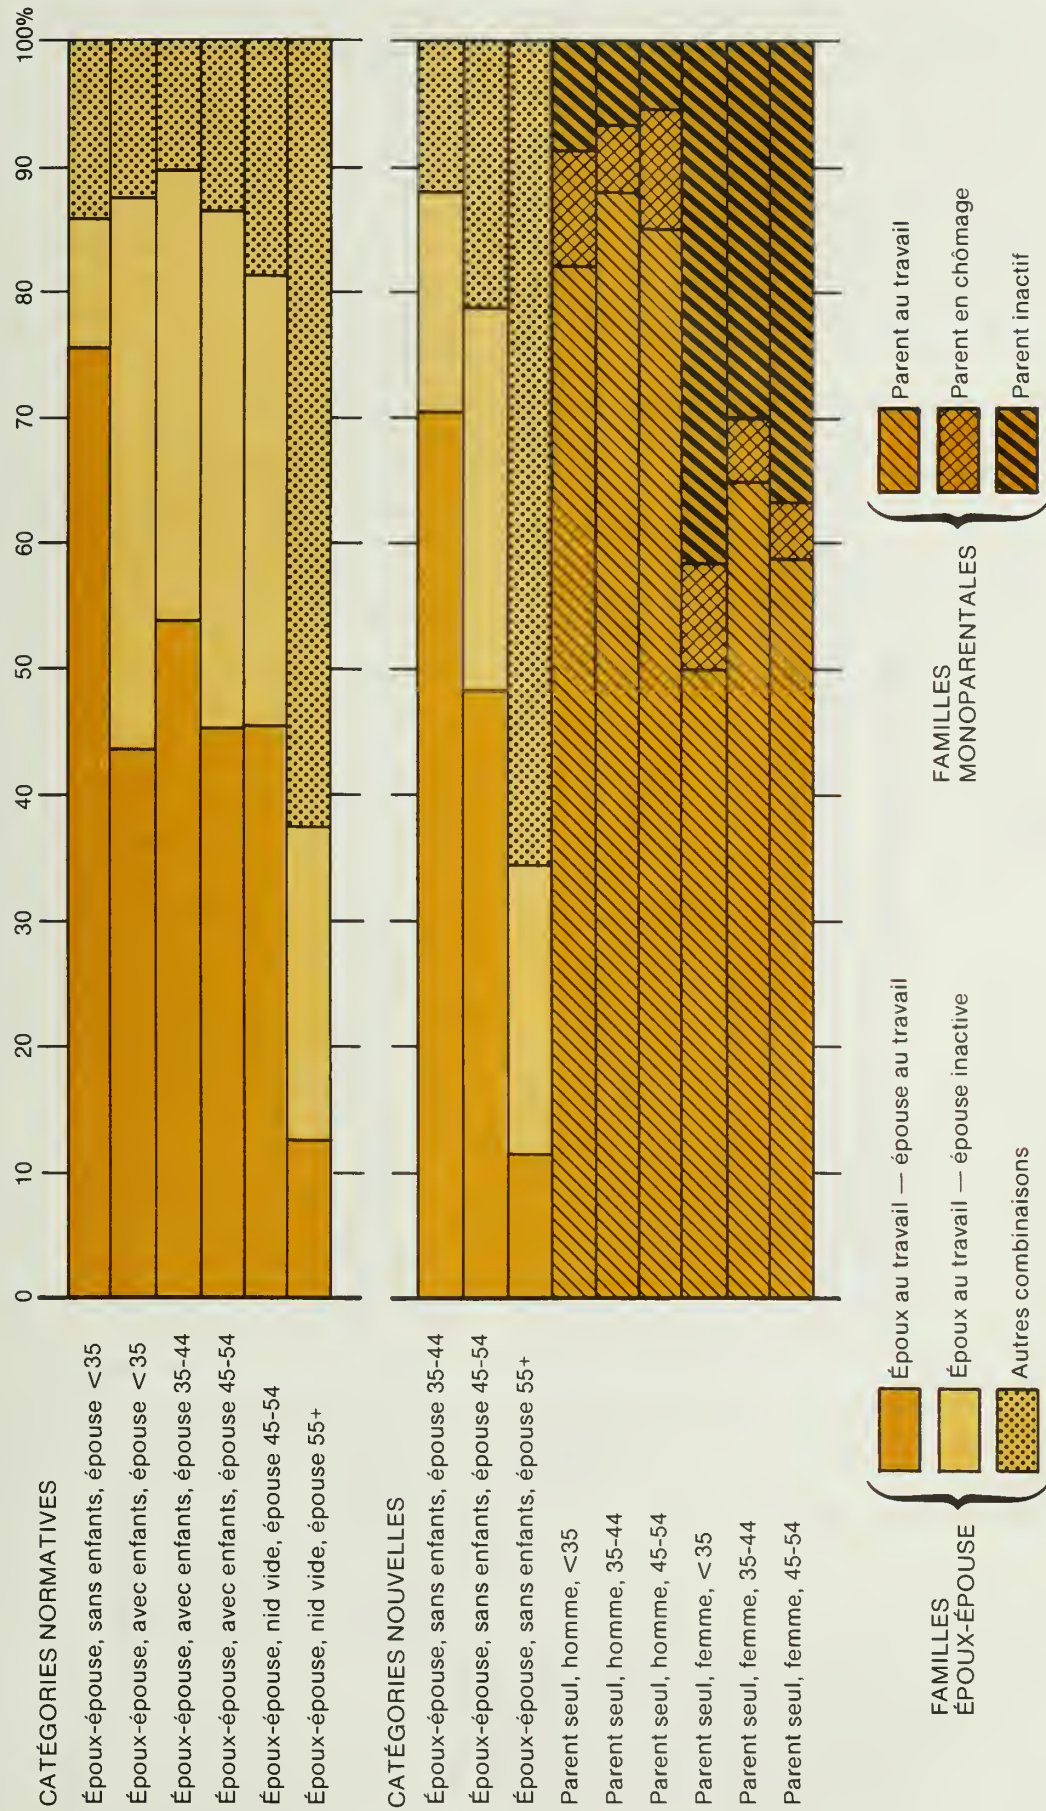

Family structure	% employed
Husband-wife, childless, wife <35	97.1
Husband-wife, with children, wife <35	94.9
Male lone parent, <35	82.1
Female lone parent, <35	50.0

Table 5. Selected Families Showing Major Source of 1980 Income, Canada, 1981

Family structure	Major source of income		
	Wages and salaries	Government transfer	Other
Husband-wife, childless, wife <35	93.5	1.9	4.6
Husband-wife, with children, wife <35	87.8	4.1	8.1
Male lone parent, <35	82.5	10.8	6.7
Female lone parent, <35	47.6	48.1	4.3

Figure 6  
Répartition de certaines familles selon la structure, par situation des époux, des épouses et des parents seuls par rapport au marché du travail, Canada, 1981

children, have both the husband and wife employed indicating a possible return to work on the part of the wife as children mature and become more independent. It is interesting to note that for an older generation of husband-wife families, with children (wife aged 45-54), the proportion of families with both spouses employed falls to 45.4% almost identical to the empty-nest families of the same age group. A similar generational drop is seen for the childless couples where the proportion of families with both spouses employed is only 48.3% (wife aged 45-54).

This may indicate a generation where attitude, lack of appropriate training or lack of opportunity has kept women out of the labour force.

On the other hand, low participation rates for young women (less than 35 years) with children are clearly tied to the bearing and rearing of those children; as was seen in Table 3, an employment rate of 46.1% for young wives with children and 50.0% for young female lone parents. These low rates obviously have a profound effect upon income. Table 5, which shows major source of income for selected young families, clearly indicates significant differences in the proportion of income received from various sources. For example, wages and salaries are the major source of income for 93.5% of the childless families, 87.8% of the husband-wife families with children, 82.5% of the male lone-parent families but only 47.6% of the female lone-parent families.

It would appear that the very low per capita incomes of the young female lone-parent families are due, in large part, to their low employment rates and their subsequent dependence upon government transfer payments. Just over 48% of these families were dependent upon such transfer payments for their major source of income.

As has been seen, families of different structures are quite diverse in terms of their occupancy patterns and consumption of housing. Similarly, there are marked differences between families in terms of their employment and hence their income. The proportion of income spent on shelter would appear to be a factor in the occupancy and consumption patterns.

### Shelter Expenditures

While family income is highly dependent upon employment the result impacts heavily upon the ability to cope with the cost of providing shelter. As a general rule it has often been stated that families paying 30% or more of their income on shelter are carrying a difficult financial burden. Those paying 50% or more

might be considered to be in a serious financial situation. Figures 7 and 8 show the percentage of renter and owner families paying more than these proportions on shelter. Figure 7, which deals with renter families, again shows considerable discrepancies between families of different structures and again young families require special mention. Note that 14.4% of young childless families (wife less than 35 years) pay 30% or more of their income on shelter but this rises to 21.4% of similar young couples with children. Young male lone-parent families were worse off where 35.8% of them expend over 30% of their income on shelter. Over 73% of the young female lone parents found themselves in a similar situation. In fact, 46.7% of these latter families paid over 50% of their income on shelter. Generally, childless families and older husband-wife families with children paid lower proportions of their incomes on rent and other shelter costs than did other families.

Figure 8 presents the shelter costs of owner families where a very different picture is seen compared to renter families. In the case of the owner families, the proportion of income spent on shelter is consistently lower the older the family. For example, 22.2% of young husband-wife families, with children, pay 30% or more of their income on shelter. This drops to 13.2% of the husband-wife families, with children, in the age group 35-44 and to 7.8% of the older families aged 45-54. Again, however, high numbers of lone-parent families, especially the young females, pay excessively high proportions of their income on shelter (70.2% of female lone parents less than 35 years).

Figures 7 and 8 provide a useful comparison of owners and renters. Generally, renters pay a higher proportion of their income on shelter than owners. This is true for most families of any given structure with some notable exceptions. Young husband-wife families, both with and without children, have higher proportions of owners than renters paying 30% or more on shelter. The same holds for male lone-parent families in the age groups of less than 35 and 35-44. In all other cases higher proportions of renters than owners bear heavy shelter costs. This probably reflects the heavy initial outlay required of young families who are purchasing their first home and may have found it necessary to carry second mortgages. It also reflects the generally lower incomes of young families compared to older families.

One of the advantages of owning compared to renting is seen in families in the older age groups. For example, 25.3% of empty-nest renter families pay more than 30% of their income on shelter. The

Figure 7  
 Distribution of Selected Renter Families by Structure, Showing Percentage Paying 30% or more and 50% or more of their Income on Shelter, Canada, 1981

Figure 8  
 Distribution of Selected Owner Families by Structure, Showing Percentage Paying 30% or more and 50% or more of their Income on Shelter, Canada, 1981

comparative figure for empty-nest owner families is only 7.9%. A similar pattern emerges for all other older families. In 1980, renter empty-nest families, wife aged 35 and over, paid an average of \$265 per month on shelter. Owners in the same group paid an average of only \$193. For childless families in the same age group, renters paid \$270 per month on average while owners paid \$185. This evidently reflects situations where many owner families have paid off their mortgages and have only to pay for taxes, services and utilities.

## Summary

It is apparent that families of different structures or of different stages of the life cycle display significantly different patterns of housing consumption.

Single-detached dwellings appear to be a desired type of housing for families. Even relatively high proportions in the range of 60%-63% of established childless families occupy single-detached dwellings. Husband-wife families with children, followed by empty-nest families, have the highest occupancy rates of this form of low density housing. Since single-detached dwellings are not often available on the rental market, families showing the highest rates for single detached also show the highest rates of home ownership. Young female lone-parent families have extremely low ownership rates and higher occupancy rates of higher density housing such as apartments or row housing.

While most Canadian housing is in good condition older childless families and empty-nest families would appear to generally occupy the housing in the best condition. Young male lone-parent families have the highest occupancy rates of housing in need of minor repair while young female lone parents have the highest rates for dwellings in need of major repair.

As might be expected, husband-wife families with children occupy the largest dwellings while young female lone-parent families occupy the smallest. Many empty-nest families appear to stay on in the homes in which they raised their families, even though they no longer face the same pressing need for the space that they did when their children were home.

The ability to acquire the type and size of housing desired appears to be closely related to income. Generally, young families have the lowest per capita incomes but pay the highest shelter costs. Young husband-wife families with children who are renters had an average income of \$20,209 in 1980 and they paid an average \$272 a month on shelter. Similar

young families who were owners had an average income in the same year of \$28,039 and paid an average of \$493 a month on shelter. Higher incomes apparently allowed some of these young families to switch from renting to owning and to acquire the desired lower density housing but just over 22% of these families faced some financial difficulty in paying 30% or more of their income on mortgage and other shelter costs.

Older family home-owners have a relative security in that their shelter costs are lower than other families and less of their income is spent on shelter but lone-parent families, particularly young females, face severe financial burdens maintaining less desirable and generally poorer housing. The high shelter cost to income ratio of these female lone parents is certainly heavily influenced by their low employment rates and dependency upon government transfer payments.

While the above presentation has allowed comparisons between families of various structures and at different stages of the life cycle, which was its purpose, it has not provided an indication of the magnitude of some of the problem areas. It is with the following, somewhat sombre figures, that this paper concludes. Just under 960,000 Canadian families spend 30% or more of their income on shelter, close to 400,000 are young families with young children.

Of even more concern are the more than 375,000 families who expend 50% or more of their income on shelter of whom close to 159,000 are young families with young children. Close to 95,000 female lone-parent families with the parent aged less than 35 pay such excessive proportions of their income on shelter. Generally they occupy the least desirable and poorest accommodation.

There are over 160,000 young children in these young female lone-parent families and over 520,000 in other young families where one-half of the income is spent on shelter. One wonders what hardships are borne in attempting to provide adequate clothing, proper nourishment and a minimum of amenities for these children.

## Gross National Product

### Second Quarter 1984 Advance Information

Gross National Product rose 2.0% in the second quarter of 1984 to a level of \$418.9 billion, seasonally adjusted at annual rates. After allowing for a 1.2% increase in overall prices, real GNP increased 0.7%, the same rate of increase as in the first quarter. Real GNP, which had recovered to its pre-recession level of activity during the fourth quarter of 1983, has now expanded a further 1.5% beyond this level.

Growth in economic activity in the second quarter was moderate in total, but was broadly based. This was in marked contrast to the first quarter when growth was dominated by the auto industry, both domestically and in the foreign sector. During the second quarter personal expenditure recorded modest growth, and there was an increase in building activity — both non-residential and residential. Investment in machinery and equipment fell, while inventory investment increased largely due to an accumulation of durable goods.

The volume of personal expenditure on goods and services advanced 1.0% in the second quarter. In contrast to the dominance of auto and auto related purchases in the first quarter, expenditure growth was more diffuse in the second. A sharp increase in spending on semi-durable goods was led by clothing sales and supported by widespread increases in other categories. Expenditure on durable goods rose at about half the rate of growth as in the first quarter with increases in the non-auto components only partly offsetting the weakness in new passenger car sales. Spending on non-durable goods rose 0.6% following two quarters of decline while spending on services rose 0.4% in the quarter.

Real residential construction activity increased 2.3% in the second quarter following three consecutive

quarters of decline. The volume of spending on new dwelling construction rose as work continued on units previously started and construction commenced on a slightly lower number of new units in the second quarter. Also contributing to growth of residential construction were small increases in real estate commissions generated in the market for resale housing and in alterations and improvements.

Following three quarters of slow growth, real spending on business plant and equipment dropped 0.8% in the second quarter, due to a decline of almost 4% in machinery and equipment investment. While domestic production and imports of a wide variety of machinery and equipment grew substantially, these goods went largely into exports or inventories rather than into final domestic demand. The non-residential construction component of investment advanced almost 3% in real terms. This strength appeared to be concentrated in small and medium-sized building projects. In nominal terms, the growth in plant and equipment investment during the first half of the year is broadly in line with the increase indicated by the mid-year estimate from the Private and Public Investment Survey for 1984. Inventory investment contributed to growth, as the rate of accumulation of non-farm inventories rose to \$1040 million from \$676 million in the previous quarter. Stock accumulation was almost entirely in manufacturing and included durable goods related to machinery and equipment investment. A substantial contribution was also made by the swing in wood and paper inventories following labour disputes in British Columbia which reduced production in the first quarter. These developments resulted in a small increase in stock-to-sales ratios in the quarter. While stock-to-sales ratios are historically low, this rise should probably not be taken as signalling the start of a sustained upturn as the most recent Statistics Canada business conditions survey reported a continuing cautious attitude by manufacturers with respect to inventory levels.

Following an 8.9% growth in the first quarter, real merchandise exports declined marginally in the second quarter. Exports of autos and auto parts were the main source of the downturn as they fell by almost 9%. Partly offsetting this decline were increased exports of paper products, industrial machinery, crude petroleum, transportation equipment and grains and grain products. Merchandise imports recorded a small decline in constant dollar terms, down sharply from the first quarter growth and again attributable to autos and auto parts. In nominal terms, higher export prices pushed the merchandise trade balance up \$3.7 billion to a record \$21.6 billion, at annual rates. The non-merchandise deficit increased by a smaller amount and the balance on goods and services swung from a deficit of \$0.5 billion to a surplus of \$1.9 billion.

In line with the continued moderate rate of increase of major price indexes in the economy, the GNE implicit price index grew 1.2%, unchanged from the first quarter rate of growth. The implicit index for final domestic demand increased by only 0.6%. The difference between this measure and the total implicit deflator is almost entirely due to a strong 3.4% rise in the terms of trade as prices of merchandise exports rose almost 5%. Price movements in other major aggregates included a slowing in the rate of increase in the deflators for personal expenditure and gross fixed capital formation.

Corporate profits were little changed in the second quarter following a 10.8% growth in the first. Profit growth in the non-financial sector was moderate in total, although much of this growth was attributable to a recovery of profits in the paper and allied industry following first quarter production disruptions due to labour disputes. Offsetting the moderate growth in non-financial sector profits was weakness in the financial sector.

Labour income rose 1.7% in the second quarter following a rate of increase of 0.8% in the first. This reflected primarily a faster pace of growth in employment during the second quarter. There was also a sharp 7.9% increase in personal investment income and a decline in personal income taxes, resulting in a 3.8% advance in personal disposable income, the first increase in three quarters. This increase, in excess of the growth in personal expenditure, caused the personal savings rate to return to the 1983 level.

The total government sector deficit, on a national accounts basis, rose \$6.2 billion to a seasonally adjusted rate of \$27.6 billion. Total expenditures increased 2.8%, largely due to higher transfers to persons, subsidies and capital assistance. Government revenues declined 0.4%, mainly as a result of lower collections of personal income taxes and petroleum-related indirect taxes.

In the second quarter of 1984, Gross National Product increased 2.0% to a level of \$418.9 billion seasonally adjusted at annual rates. In real terms GNP rose 0.7%.

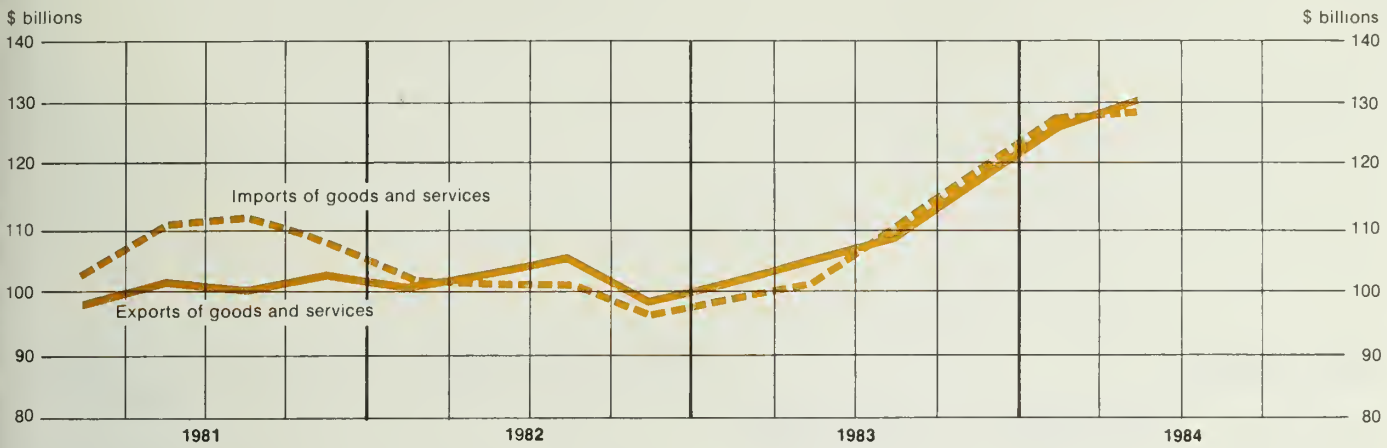

Wages, salaries and supplementary labour income and military pay and allowances rose 1.7%, compared to 0.8% in the first quarter of 1984. Interest and miscellaneous investment income rose sharply while corporation profits were little changed in the quarter, following a 10.8% growth in the first.

Note: All quarterly data adjusted for seasonal variation and at annual rates

Exports and imports of goods and services rose by 3.2% and 1.4% respectively with the result that the balance on goods and services swung from a deficit of \$0.5 billion in the first quarter to a surplus of \$1.9 billion in the second, seasonally adjusted at annual rates.

Growth in economic activity was moderate, but broadly based. Personal expenditure recorded modest growth and there was an increase in both residential and non-residential building activity. Investment in machinery and equipment fell, while inventory investment increased.

(Quarterly changes in GNE and components in constant (1971) dollars)

Note: All quarterly data adjusted for seasonal variation and at annual rates

## Observations

### CANADA'S CHANGING POPULATION DISTRIBUTION

Canada's population grew 12.9 per cent between 1971 and 1981, the lowest ten-year increase since the nineteen thirties. Since 1901, the proportion of Canadians living in the Atlantic Provinces has been decreasing steadily while the proportion living in British Columbia has been increasing continuously. *CANADA'S CHANGING POPULATION DISTRIBUTION*, a new publication from Statistics Canada, highlights major changes in the geographic distribution of Canada's population.

*CANADA'S CHANGING POPULATION DISTRIBUTION* delves into more recent trends. In the five-year period from 1976 to 1981, Alberta showed the strongest growth, accounting for 29.6 per cent of the growth in Canada's population, while Ontario and Quebec accounted for 26.7 per cent and 15.1 per cent respectively.

During these five years there was a continuation of the trend which first emerged in the early nineteen seven-

ties, that is, the share of Canadians living in rural areas (as opposed to urban areas) inched upwards. However, as this study reveals, much of this rural growth occurred close to the large urban areas.

*CANADA'S CHANGING POPULATION DISTRIBUTION* shows that interprovincial differences in proportions of elderly people, young people and immigrants are shrinking but that the provinces are steadily becoming more diverse with respect to the proportion of residents who speak "French only".

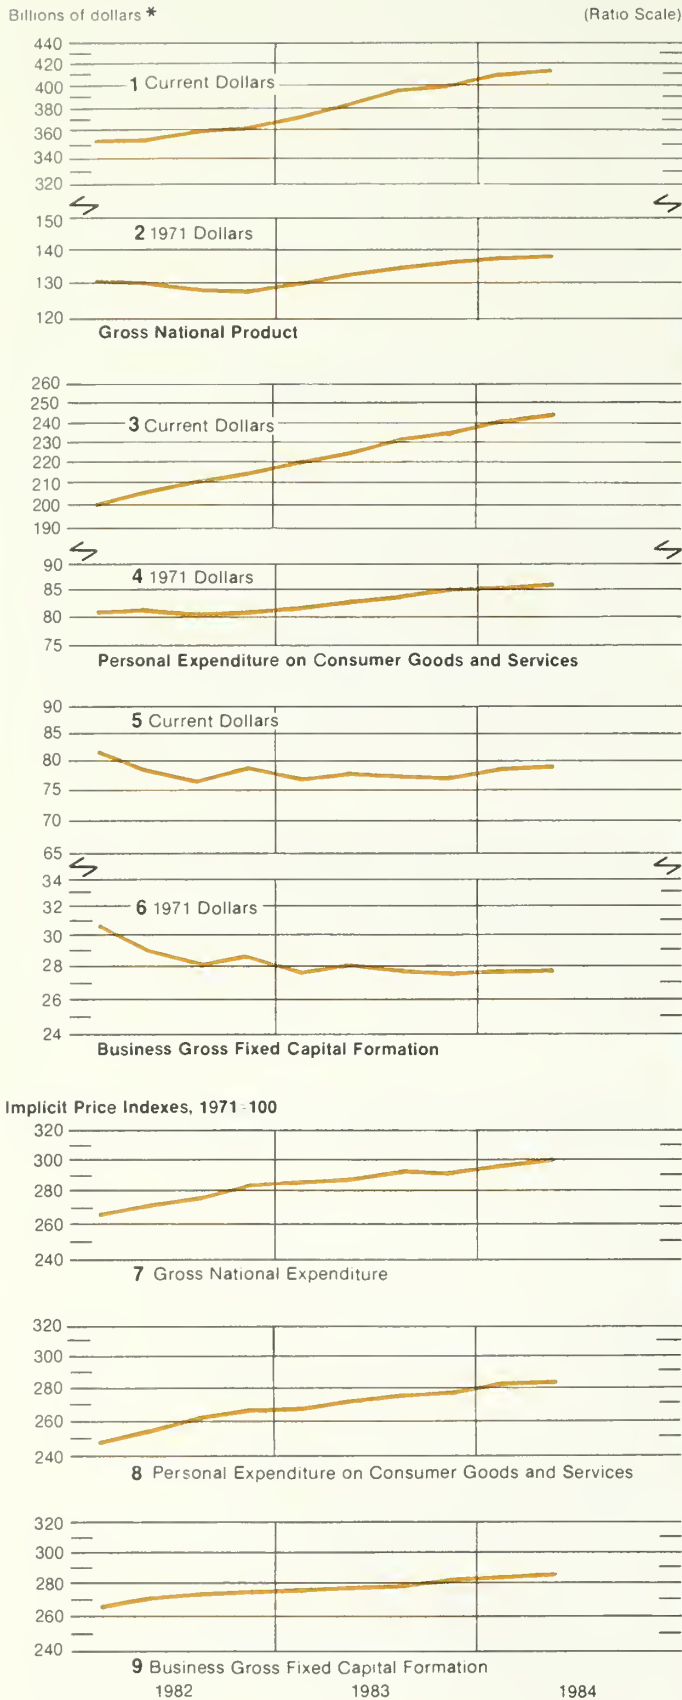

This publication is part of the Census Content Series of non-technical publications featuring many charts, graphs and maps. *CANADA'S CHANGING POPULATION DISTRIBUTION* will be of interest to teachers and students of geography and social studies.

For your copy of *CANADA'S CHANGING POPULATION DISTRIBUTION*, (Catalogue No. 99-931, \$5.50 in Canada, \$6.60 elsewhere), send a cheque or remittance payable to the Receiver General for Canada to: Publications Sales and Services, Statistics Canada, Ottawa, Ontario, K1A 0T6.

<sup>1</sup>In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency. <sup>2</sup>Composite Index of Housing Starts (units), Building Permits (dollars), and Mortgage Loan Approvals (number). <sup>3</sup>Deflated by the Consumer Price Index. <sup>4</sup>Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

## Section 2 · Population Statistics

- 14 1. Population by Province
- 14 2. Immigration to Canada, by Country of Last Permanent Residence
- 15 3. Immigration to Canada, by Province of (Intended) Destination
- 15 4. Immigration to Canada, by (Intended) Occupational Group
- 16 5. Births, by Province
- 16 6. Deaths, by Province
- 16 7. Marriages, by Province

<sup>1</sup>As of the first of each month. Quarterly and annual data from 1951 to April 1, 1981 are intercensal estimates; final postcensal estimates from July 1, 1981 to April 1, 1982; updated postcensal estimates from July 1, 1982 to October 1, 1983 and preliminary postcensal estimates for January 1984. For an explanation of population estimates methodology and data sources see catalogue (91-201) and (91-001). <sup>2</sup>These estimates have been modified due to a revision in the number of births for January to December 1983. Source: Quarterly Estimates of Population for Canada and Provinces (91-001), Annual Estimates of Population for Canada and Provinces at June 1st (91-201), Statistica Canada.

<sup>1</sup>The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. <sup>2</sup>Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. <sup>3</sup>Includes logging, fishing, trapping and hunting. <sup>4</sup>Includes mechanical and construction. <sup>5</sup>Includes a small number in non-specified occupations. <sup>6</sup>Beginning with 1978 includes fiancés and fiancées. <sup>7</sup>Does not include students entering Canada on students' visas. <sup>8</sup>Includes also retired persons, elderly dependents, and other unspecified persons.

<sup>1</sup>Excludes profits (net of losses) of government business enterprises. <sup>2</sup>Includes the withholding tax applicable to this item. <sup>3</sup>Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. <sup>4</sup>Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. <sup>5</sup>Includes net income of independent professional practitioners. <sup>6</sup>See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

<sup>1</sup>Includes defence expenditures. <sup>2</sup>Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. <sup>3</sup>Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. <sup>4</sup>The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). <sup>5</sup>See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

<sup>1</sup>The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

<sup>1</sup>Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. <sup>2</sup>Tax liabilities. <sup>3</sup>Withholding taxes. <sup>4</sup>The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

2	286.0	291.7	289.8	279.4	317.5	317.2	313.3	304.7	300.3

<sup>1</sup>These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

<sup>1</sup>The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. <sup>2</sup>The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

## Section 6 · Manufacturing

- 8 1. Total Inventories, Shipments and Orders in Manufacturing
- 9 2. Manufacturing Shipments by Industry
- 1 3. Manufacturing Inventories by Industry
- 3 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
- 4 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
- 5 6. Estimated Value of Goods in Process and finished Products by Economic Use Classification
- 6 7. Tobacco and Beverages
- 6 8. Rubber
- 7 9. Footwear
- 8 10. Production of Sawn Lumber
- 8 11. Pulpwood, Wood Pulp and Newsprint
- 9 12. Primary Iron and Steel
- 0 13. New Motor Vehicles
- 1 14. Production of Motor Vehicles in Canada
- 2 15. Refrigerators, Freezers, Washing Machines and Clothes Dryers

Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)<sup>1</sup>

Annual average and month	Shipments <sup>2</sup>	New orders received during month <sup>3</sup>	Unfilled orders at end of month	Inventory at end of month							Ratio of inventories owned to shipments
				Owned <sup>4</sup>	Held but not owned	All inventory held					
						Total	Raw materials	Goods in process	Finished products

<sup>1</sup>Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. <sup>2</sup>Shipments of goods manufactured within the establishments. <sup>3</sup>Total new orders received during the period at estimated selling value, net of cancellations. <sup>4</sup>Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

<sup>1</sup>Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. <sup>2</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. <sup>3</sup>Customs exports. <sup>4</sup>Mill shipments destined for export.

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

<sup>1</sup>Data compiled according to the Steel Distribution Index revised January, 1964. <sup>2</sup>Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. <sup>3</sup>Excluding shipments for re-processing at maker's own plant. <sup>4</sup>Data compiled as submitted by the steel producers according to the steel industry distribution code.

<sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. Source: Housing Starts and Completions (64-002), Statistics Canada.

<sup>1</sup>Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. <sup>2</sup>The major groups include additional components than the selected ones shown.

Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

## Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

### CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200)  
or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Newfoundland and Labrador	Zenith 0-7037

## Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

*CANSIM Main Base Series Directory* — \$60.

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

*CANSIM Mini Base Series Directory*, Catalogue 12-569 — \$16.70 Canada, \$20 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

*CANSIM-Cross Classified Data Base Index* — \$7.

This index provides a summary of available data on the Cross Classified Data Base.

*CANSIM-Cross Classified Data Base Directory* — \$20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

## Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field  
R.E. Drover — Director, Corporate Assignments Division  
B.J. Lynch — Director General, Operations Branch  
R. Platek — Director, Methodology Division  
M. Podehl — Director, CANSIM Division  
G.J. Brackstone — Director General, Methodology Branch

A. Meguerditchian — Director, Financial Flows and Multinational Enterprises Division  
L.O. Stone — Senior Advisor, Population Studies and Statistics  
P.N. Triandafillou — Director, Industry Product Division  
K. Lal — Director General, System of National Accounts Branch  
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

## Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation,

are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

## Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related NSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Please note that in the article entitled "Family Life Cycle and Housing Consumption in Canada: A Review Based on the 1981 Census", in the September 1984 issue, Figure number 6 was inadvertently reproduced with French titles. The corrected version appears on page vi of this issue.

Figure 6  
 Distribution of Selected Families by Structure, Showing Labour Force and  
 Employment Activity of Husbands, Wives and Lone Parents, Canada, 1981

## Observations

### Canada's Native People

The 1981 Census counted about half a million Canadians who reported native ancestry. The Census identified the following four groups of native people: status Indians, non-status Indians, Métis and Inuit.

This publication discusses those native people who were identified by the 1981 Census. It tells who and where they are and how they live. It examines their languages, education and income. Finally, it provides an idea of what these findings may indicate for the future.

Although the Census counted native people in each province, more than half resided in the Prairies and British Columbia. However, different native groups lived in different regions. Two-thirds of the Métis were in the Prairies; the proportion of Inuit in the Territories was almost as high. Unlike other native groups, fairly large proportions of Inuit were in the Atlantic region (Labrador) and Quebec.

Six out of ten native people reported English as the first language they learned as children and could still understand. Only 3 in 10 claimed a native language as their mother tongue, while French and other languages accounted for the remainder.

Among aboriginal languages, the Algonkian group was most common. Within this category, Cree was ranked first, followed by Ojibway. This was true for all native people except the Inuit, three-quarters of whom had Inuktitut as their mother tongue.

Young people made up a much larger proportion of the native population than the non-native. Seven out of 10 were under 30 compared with just 5 out of 10 for the rest of the population. In 1981, the average age of native people was 23 in contrast to 32 for non-natives. The Inuit population was "youngest", while non-status Indians were the "oldest" group.

*CANADA'S NATIVE PEOPLE* focuses on some of the major demographic and socio-economic characteristics of Canada's native people, including family size, education, income, and household characteristics. This publication is part of the Census Content Series of non-technical publications featuring many charts and tables.

You can purchase your copy of *CANADA'S NATIVE PEOPLE* (Catalogue No. 99-937; \$5.50 in Canada, \$6.60 elsewhere) by sending a cheque or money order payable to the Receiver General for Canada, to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

(La version française de ce sommaire est disponible sur demande.)

### CANADA'S IMMIGRANTS

In June 1981, there were 3.8 million immigrants in Canada, making up 16 percent of the total population. This proportion represents a slight rise from just over 15 per cent in 1971, but is well below the 22 per cent record of 1921, according to *CANADA'S IMMIGRANTS*, a new publication from Statistics Canada.

Of the people identified as immigrants at the time of the 1981 Census, close to a third had arrived after 1970. Of these, 34 per cent were from Europe, but almost as many (33 per cent) had come from Asia. Another 16 per cent were from the Caribbean and Central and South America.

The majority of immigrants, approximately 2 million persons, had a mother tongue other than English or French, yet only about 200,000 of them were unable to speak English or French.

Ontario was home to more than half of Canada's immigrants. In relation to its share of the total popula-

tion, British Columbia had also attracted a disproportionately high number.

*CANADA'S IMMIGRANTS* discusses numerous other characteristics of the immigrant population, such as age, educational level, income, household status and citizenship. The data show that immigrants are, on average older than other Canadians, better educated, more likely to be employed, and more likely to live in a two-parent family. They have achieved income levels which frequently exceed those of the Canadian-born population.

This publication is part of the 1981 Census Content Series of non-technical publications featuring many

charts and graphs. Although it is designed to be of general interest, *CANADA'S IMMIGRANTS* will also be particularly useful to teachers for courses in social studies, citizenship and multiculturalism.

For your copy of *CANADA'S IMMIGRANTS*, (Catalogue No. 99-936, \$5.50 in Canada, \$6.60 elsewhere) send a cheque or money order payable to the Receiver General for Canada to: Publication Sales and Services, Statistics Canada, Ottawa, Ontario, K1A 0T6.

<sup>1</sup>In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency (units), Building Permits (dollars), and Mortgage Loan Approvals (number). <sup>2</sup>Composite Index of Housing Starts (units). <sup>3</sup>Deflated by the Consumer Price Index. <sup>4</sup>Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

## Section 2 · Population Statistics

- 14 1. Population by Province
- 14 2. Immigration to Canada, by Country of Last Permanent Residence
- 15 3. Immigration to Canada, by Province of (Intended) Destination
- 15 4. Immigration to Canada, by (Intended) Occupational Group
- 16 5. Births, by Province
- 16 6. Deaths, by Province
- 16 7. Marriages, by Province

<sup>1</sup>As of the first of each month. Quarterly and annual data from 1951 to April 1, 1981 are intercensal estimates, final postcensal estimates from July 1, 1981 to April 1, 1982; updated postcensal estimates from July 1, 1982 to October 1, 1983 and preliminary postcensal estimates for January 1984. For an explanation of population estimates methodology and data sources see catalogue (91-201) and (91-001). <sup>2</sup>These estimates have been modified due to a revision in the number of births for January to December 1983.

Sources: Quarterly Estimates of Population for Canada and Provinces (91-001), Annual Estimates of Population for Canada and Provinces at June 1st (91-201), Statistics Canada.

<sup>1</sup>The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census, see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. <sup>2</sup>Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. <sup>3</sup>Includes logging, fishing, trapping and hunting. <sup>4</sup>Includes mechanical and construction. <sup>5</sup>Includes a small number in non-specified occupations. <sup>6</sup>Beginning with 1978 includes fiances and fiancées. <sup>7</sup>Does not include students entering Canada on students' visas. <sup>8</sup>Includes also retired persons, elderly dependents, and other unspecified persons.

## Section 3 · System of National Accounts

### 1. Income and Expenditure Accounts

- 18 1.1 National Income and Gross National Product
- 18 1.2 Gross National Expenditure
- 19 1.3 Gross National Expenditure, Constant Dollars
- 19 1.4 Sources of Personal Income
- 20 1.5 Disposition of Personal Income
- 20 1.6 Sources and Disposition of Gross Saving
- 21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
- 25 1.8 Implicit Price Indexes, Gross National Expenditure
- 25 1.9 Relation between Gross National Product at Market Prices and  
Gross Domestic Product at Factor Cost

### 2. Domestic Product by Industry

- 26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
- 27 2.2 Gross Domestic Product by Industry of Origin, Monthly

### 3. Balance of International Payments

- 32 3.1 Canadian Balance of International Payments, Current Account, All Countries
- 33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
- 34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

<sup>1</sup>Excludes profits (net of losses) of government business enterprises. <sup>2</sup>Includes the withholding tax applicable to this item. <sup>3</sup>Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. <sup>4</sup>Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. <sup>5</sup>Includes net income of independent professional practitioners. <sup>6</sup>See footnote 4, Table 1.2.

<sup>1</sup>Includes defence expenditures. <sup>2</sup>Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. <sup>3</sup>Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. <sup>4</sup>The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). <sup>5</sup>See footnote 4, Table 1.1.

<sup>1</sup>The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

<sup>1</sup>Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. <sup>2</sup>Tax liabilities. <sup>3</sup>Withholding taxes. <sup>4</sup>The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

2	286.0	291.7	289.8	279.4	317.5	317.2	313.3	304.7	300.3

<sup>1</sup>These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

<sup>1</sup>The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. <sup>2</sup>The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

<sup>1</sup>Beneficiaries refer to the number of persons receiving \$1.00 or more in unemployment insurance benefit during a specific week each month. <sup>2</sup>Annual figures are averages of 12 months. <sup>3</sup>Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. <sup>4</sup>Trainees on courses approved by Canada Employment and Immigration Commission.

<sup>1</sup>Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

<sup>2</sup>The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. <sup>3</sup>The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. <sup>4</sup>The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. <sup>5</sup>Includes publishing and allied industries. <sup>6</sup>Includes storage and communication industries.

<sup>1</sup>Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. <sup>2</sup>Shipments of goods manufactured within the establishments. <sup>3</sup>Total new orders received during the period at estimated selling value, net of cancellations. <sup>4</sup>Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments<sup>1</sup> by industry based on the 1970 standard industrial classification (million dollars)

<sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. Source: Housing Starts and Completions (64-002), Statistics Canada.

<sup>1</sup>Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. <sup>2</sup>The major groups include additional components than the selected ones shown.

<sup>1</sup>Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). <sup>2</sup>The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). <sup>3</sup>For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

<sup>1</sup>Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.  
<sup>1</sup>This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres, however, this comparison may not remain valid through time. <sup>2</sup>Seasonally adjusted data for Saskatchewan is not available.

## Data in Many Forms.

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

### CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200)  
or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

## Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

*CANSIM Main Base Series Directory* — \$60.

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

*CANSIM Mini Base Series Directory*, Catalogue 12-569 — \$16.70 Canada, \$20 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

*CANSIM-Cross Classified Data Base Index* — \$7.

This index provides a summary of available data on the Cross Classified Data Base.

*CANSIM-Cross Classified Data Base Directory* — \$20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

## Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

- S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
- E. Drover — Director, Corporate Assignments Division
- J. Lynch — Director General, Operations Branch
- Platek — Director, Census and Household Survey Methods Division
- Podehl — Director, CANSIM Division
- J. Brackstone — Director General, Methodology Branch

- A. Meguerditchian — Director, International and Financial Economics Division
- L.O. Stone — Senior Advisor, Population Studies and Statistics
- P.N. Triandafillou — Director, Agriculture Statistics Division
- K. Lal — Director General, System of National Accounts Branch
- D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

## Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation,

are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

## Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

## Financial Activity in Canada Second Quarter 1984

In line with only moderate growth of the production of goods and services in the second quarter, final demand for conventional credit market instruments remained restrained. The non-financial domestic sectors of the Canadian economy raised \$16.8 billion in the period, representing 16.4% of Gross National Expenditure, compared with 17% in the previous quarter and 15.8% in the second quarter of 1983.

General government (Sectors X and XI) were the principal borrowers, accounting for almost half of the funds raised on these markets, while households were also important borrowers, raising one third. While this situation was somewhat similar to the second quarter of 1983 when households and government more than accounted for all the funds raised on conventional markets, it was something of a reversal from the previous quarter which had been marked by a notable increase in activity on financial markets by non-financial private corporations.

It would appear that the drop in the amount of external funds raised by non-financial private corporations on these markets, from \$5.1 billion in the first quarter to \$2 billion in the second, was attributable to a number of factors. Internally generated funds were able to generate almost all the capital acquisition costs: gross fixed capital formation was \$1.5 billion higher than the previous quarter but inventories held dropped moderately, (compared with a very rapid accumulation in the first quarter) which almost balanced the record net savings and capital consumption allowances. The continuing relative weakness of fixed capital formation by these corporations — amounting to only 9.9% of GNE, compared to 13.9% in the second quarter of 1981 — would appear to be related to their low capacity utilisation rates, on the one hand, and to their need to restore their debt: equity ratios to a more historic norm. To that end, net share issues amounted to \$1.5 billion. An additional aspect of the gradual

movement to healthier balance sheets was the lengthening of debt schedules, as long-term debt — mortgages and bonds — raised \$1.3 billion, while bank debt, mostly a short-term instrument, was paid down by \$1.7 billion.

With the federal government's financing requirement continuing to grow, reaching \$8.2 billion in the quarter under review, the Government of Canada remained the single largest borrower on financial markets. Net issues of Treasury bills amounted to \$5 billion, up from \$2.7 billion in the previous quarter and \$4.2 billion in the second quarter of 1983. The Treasury bills sales went, in fair measure, to refinancing \$2.4 billion in redemption of Canada Savings Bonds. This latter figure was almost twice the redemptions of the first quarter. It would appear that the household sector was largely exchanging holdings of the one instrument for the other, innovations in financial markets making it easier for persons to buy bills. Net issues of Canadian dollar marketable bonds produced \$2.3 billion, up from \$2.0 billion in the previous quarter. The emphasis on Treasury bill financing reduced the average term to maturity of the Government of Canada debt (excluding Canada Savings Bonds) from five years and five months at the end of March to five years and four months at the end of June. Of the gross new issues of the federal government's marketable bonds denominated in Canadian dollars, 42% had maturities of five years or less, while only 29% had maturities of longer than twenty years, down from one third in the previous quarter.

The federal government's financing needs were also met in part through operations on the foreign exchange markets. Foreign currency borrowings amounted to U.S. \$500 million in borrowings from non-resident banks, 300 million Swiss franc loan and 700 million Swiss franc bonds, together amounting to \$1.2 billion. While these funds were used in part to

finance a maturing Deutschmark bond, the balance was transferred to the Exchange Fund Account. To the extent that these funds were used to acquire Canadian dollars on foreign exchange markets they would have represented a source of funds to the Government of Canada's Consolidated Revenue Fund.

Households raised \$6.0 billion in net new funds from conventional credit markets. Most of these funds were from consumer credit (\$1.8 billion) and mortgages (\$3.3 billion). There is an element of seasonality in household borrowings, particularly for consumer credit; therefore, although this represented a two fold increase over the first quarter, it is practically identical to the borrowings in the same quarter of 1983. This relative strength in consumer credit is a little surprising in view of the slowing in auto purchases which typically is a major determinant of the movements in consumer credit. Mortgage financing was about the average for the previous five quarters, but it was \$900 million lower than the second quarter of 1983 when government programs prompted increased borrowing.

Following the late March weakness vis-a-vis its United States counterpart, the value of the Canadian dollar continued to fall in April and May before dropping sharply in June to touch a record low of 75.77 cents U.S. Low inflation, strong growth and a relatively restrained monetary policy by the Federal Reserve Board helped make attractive holdings of United States dollar instruments. Yields on short-term instruments rose over one percentage point, while longer-term instruments demonstrated an even greater increase. As a result, despite rises in interest rates in Canada, there were periods during the quarter when the uncovered differential on thirty day commercial paper moved in favour of investing in the United States. By the end of the quarter, this differential showed about 40 basis points in Canada's favour. Yields in Canada on shorter term instruments rose by more than those on longer term, indicating that ex-

change rate considerations appeared to be the major influence on rates.

The Bank of Canada acquired \$900 million of Government of Canada Treasury bills during June, leading to a net acquisition of \$465 million over the quarter. Without these purchases, interest rates would have risen more. At the end of June, yields on 90-day commercial paper were 12.1%, slightly lower than 91-day Treasury bills.

In contrast, the chartered banks sold \$615 million in Government of Canada Treasury bills, the third successive quarter in which they have reduced their holdings, bringing the cumulative sale to \$3.5 billion. However, with Canadian dollar deposit liabilities growing (for only the second of the last ten quarters), and loans resuming their net repayments, the chartered banks tended to apply these funds to their subsidiaries and branches abroad. Since the peak of loan demand at the end of 1981, \$17.2 billion have been repaid, representing 13% of the amount outstanding at that time. The reduction of the banks' loans outstanding is largely attributable to non-financial private corporations' restructuring their balance sheets. At the end of June, the banks' excess secondary reserve ratio stood at 5.45, down from 5.60 in March, and well below the peak of 7.17 recorded in September, 1983.

The personal savings rate rose in the second quarter, partly as a result of the settlement of the strike in the forestry industry in British Columbia, as well as tax refunds' being mailed earlier than in 1983. Households tended to place their discretionary funds in deposits payable at a fixed date at banks, in term deposits at near banks, and into Treasury bills and short-term paper, while redeeming \$2.4 billion in Canada Savings Bonds. With \$1.3 billion redeemed in the first quarter, over 40% of the net issue of this instrument acquired in the fourth quarter 1983 have been encashed.

Financial Market Summary Table compresses the abundance of detail presented in the Financial Flows sector tables by aggregating sectors by deleting non-market instruments such as trade credit and claims on associated enterprises. The table also provides a useful approximation of borrowing via financial markets (i.e., the organized markets for security issues and negotiated loans) and avoids double counting of the intermediary borrowing and re-lending of financial institutions. Line 5 (Total Borrowing by Domestic Non-Financial Sectors) provides the complicated total which serves as a simple summary statistic of domestic credit market activity. The addition of the Rest of the World and Financial Institutions (lines 6 and 8) completes the system and consequently line 9 (Total Funds Raised=Total Funds Supplied) reflects the basic identity that change in liabilities, summed across sectors, for an instrument or instruments equals the change in assets, summed across sectors, for the same instrument or instruments. Further discussion of the table is contained in an article published in Financial Flow Accounts, Second Quarter 1976 and Canadian Statistical Review, March 1977.

Since Sector XII, Social Security Funds, has been consolidated with General Government, the holdings by the Funds of Provincial and Federal Government bond debt are netted out: the asset bond figure (category 2420) for Sector XII is subtracted from the sum of the liability bond figure for Sectors X (Federal Government) plus XI (Provincial and Local Governments and Hospitals).

Separate figures for the share liabilities of the Rest of the World (Sector XIII) are not available but since Foreign Investments (category 3530) consists mostly of shares, it is classified to Stocks.

The Stock figure included in Sector I and II is the true residual of category 3520, i.e., it is the sum of category 3520 (the stock liability) less the sum of category 2520 (the stock asset) for sectors III through XIII. This procedure is necessary to ensure the balance between total funds supplied and raised in line 9. In the main Financial Flows Matrix the sum across sectors of corporate claims plus stocks on the liability side equals the sum of the two on the asset side; however, stocks alone do not balance because stocks on the liability side include shares issued to associated enterprises (included in corporate claims on the asset side).

## Observations

### Women in the Work World

In 1981, for the first time in Canadian history, more than 50 per cent of women 15 years of age or older were either working or looking for work. *WOMEN IN THE WORK WORLD* describes various characteristics of the 4.5 million women who were part of the labour force at the time of the last Census.

It may come as no surprise to find that the highest participation rate was found among women who were single, and that the greatest increases in participation since 1971 were among married women. However, it may be a surprise that 56 per cent of mothers whose children were all between the ages of 2 and 5 were also in the labour force.

The surge of women in their early twenties into the labour force was almost as strong among married women as among singles. Getting married did not mean staying out of the work force as it did for most women a generation ago. However, while their numbers increased dramatically, women still earn less than men at every educational and age level.

Whether they live in a rural area or in a large urban centre, Canadian women are much more apt to be in the labour force if they have high school or post-secondary education. In 1981, over three-quarters of female university graduates were in the labour market;

in contrast, this was true of only one-quarter of women who now attained a level of grade 9 or more.

*WOMEN IN THE WORK WORLD* focuses on many of the major demographic and socio-economic characteristics of the working woman, including her age, marital status, education and province of residence. The section on women's participation in selected occupations and their average employment income (compared with that of men) will be of particular interest to all levels of government, and those involved with labour force studies and career guidance. Educators in the fields of socio-economic studies, commerce, and Canadian studies will find this report a useful tool.

As part of the Census Content Series, this publication is written in non-technical language and is enhanced by many tables and charts.

You can purchase your copy of *WOMEN IN THE WORK WORLD* (Catalogue No. 99-940; \$5.50 in Canada, \$6.60 elsewhere) by sending a cheque or money order payable to: the Receiver General for Canada, to Publication Sales and Services, Statistics Canada, Ottawa, Ontario K1A 0T6.

<sup>1</sup>In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency (units), Building Permits (dollars), and Mortgage Loan Approvals (number). <sup>2</sup>Composite Index of Housing Starts (units). <sup>3</sup>Deflated by the Consumer Price Index. <sup>4</sup>Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

## Section 2 · Population Statistics

- 14 1. Population by Province
- 14 2. Immigration to Canada, by Country of Last Permanent Residence
- 15 3. Immigration to Canada, by Province of (Intended) Destination
- 15 4. Immigration to Canada, by (Intended) Occupational Group
- 16 5. Births, by Province
- 16 6. Deaths, by Province
- 16 7. Marriages, by Province

<sup>1</sup>As of the first of each month. Quarterly and annual data from 1951 to April 1, 1981 are intercensal estimates; final postcensal estimates from July 1, 1981 to April 1, 1982; updated postcensal estimates from July 1, 1982 to October 1, 1983 and preliminary postcensal estimates for January 1984. For an explanation of population estimates methodology and data sources see catalogue (91-201) and (91-001). <sup>2</sup>These estimates have been modified due to a revision in the number of births for January to December 1983. Sources: Quarterly Estimates of Population for Canada and Provinces (91-001), Annual Estimates of Population for Canada and Provinces at June 1st (91-201), Statistics Canada.

<sup>1</sup>The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. <sup>2</sup>Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. <sup>3</sup>Includes logging, fishing, trapping and hunting. <sup>4</sup>Includes mechanical and construction. <sup>5</sup>Includes a small number in non-specified occupations. <sup>6</sup>Beginning with 1978 includes fiancés and fiancées. <sup>7</sup>Does not include students entering Canada on students' visas. <sup>8</sup>Includes also retired persons, elderly dependents, and other unspecified persons.

## Section 3 • System of National Accounts

### 1. Income and Expenditure Accounts

- 18 1.1 National Income and Gross National Product
- 18 1.2 Gross National Expenditure
- 19 1.3 Gross National Expenditure, Constant Dollars
- 19 1.4 Sources of Personal Income
- 20 1.5 Disposition of Personal Income
- 20 1.6 Sources and Disposition of Gross Saving
- 21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
- 25 1.8 Implicit Price Indexes, Gross National Expenditure
- 25 1.9 Relation between Gross National Product at Market Prices and  
Gross Domestic Product at Factor Cost

### 2. Domestic Product by Industry

- 26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
- 27 2.2 Gross Domestic Product by Industry of Origin, Monthly

### 3. Balance of International Payments

- 32 3.1 Canadian Balance of International Payments, Current Account, All Countries
- 33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
- 34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

## 1—Income and expenditure accounts

<sup>1</sup>Excludes profits (net of losses) of government business enterprises. <sup>2</sup>Includes the withholding tax applicable to this item. <sup>3</sup>Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. <sup>4</sup>Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. <sup>5</sup>Includes net income of independent professional practitioners. <sup>6</sup>See footnote 4, Table 1.2. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

Table 1.2: Gross national expenditure (millions of dollars)

<sup>1</sup>Includes defence expenditures. <sup>2</sup>Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. <sup>3</sup>Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. <sup>4</sup>The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). <sup>5</sup>See footnote 4, Table 1.1. Source: National Income and Expenditure Accounts (13-001), Statistics Canada.

## 1—Income and expenditure accounts

Table 1.3: Gross national expenditure in constant (1971) dollars (millions of dollars)<sup>1</sup>

<sup>1</sup>The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

<sup>1</sup>Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. <sup>2</sup>Tax liabilities. <sup>3</sup>Withholding taxes. <sup>4</sup>The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. For source see Table 1.9.

2	286.0	291.7	289.8	279.4	317.5	317.2	313.3	304.7	300.3

<sup>1</sup>These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.  
For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

Year and quarter	Gross national product at market prices			Investment income received from non-residents	Investment income paid to non-residents	Gross domestic product at factor cost	Gross national product at market prices			Investment income received from non-residents	Investment income paid to non-residents	Gross domestic product at factor cost
	Residual error of estimate	Indirect taxes less subsidies	Investment income received from non-residents				Residual error of estimate	Indirect taxes less subsidies

<sup>1</sup>The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. <sup>2</sup>The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

<sup>1</sup>Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

<sup>2</sup>The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. <sup>3</sup>The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. <sup>4</sup>The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. <sup>5</sup>Includes publishing and allied industries. <sup>6</sup>Includes storage and communication industries.

## Section 6 · Manufacturing

- 68 1. Total Inventories, Shipments and Orders in Manufacturing
- 69 2. Manufacturing Shipments by Industry
- 71 3. Manufacturing Inventories by Industry
- 73 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
- 74 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
- 75 6. Estimated Value of Goods in Process and finished Products by Economic Use Classification
- 76 7. Tobacco and Beverages
- 76 8. Rubber
- 77 9. Footwear
- 78 10. Production of Sawn Lumber
- 78 11. Pulpwood, Wood Pulp and Newsprint
- 79 12. Primary Iron and Steel
- 80 13. New Motor Vehicles
- 81 14. Production of Motor Vehicles in Canada
- 82 15. Refrigerators, Freezers, Washing Machines and Clothes Dryers

Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)<sup>1</sup>

Annual average and month	Inventory at end of month									Ratio of inventories owned to shipments
	Shipments <sup>2</sup>	New orders received during month <sup>3</sup>	Unfilled orders at end of month	Owned <sup>4</sup>		All inventory held				
				Owned <sup>4</sup>	Held but not owned	Total	Raw materials	Goods in process	Finished products

<sup>1</sup>Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. <sup>2</sup>Shipments of goods manufactured within the establishments. <sup>3</sup>Total new orders received during the period at estimated selling value, net of cancellations. <sup>4</sup>Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.  
Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

<sup>1</sup>Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. <sup>2</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. <sup>3</sup>Customs exports. <sup>4</sup>Mill shipments destined for export.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

<sup>1</sup>Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc.<sup>2</sup>Includes crude oil, condensate and pentanes plus.<sup>3</sup>Gross new production by field less field flared and waste.

<sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. Source: Housing Starts and Completions (64-002), Statistics Canada.

<sup>1</sup>Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. <sup>2</sup>The major groups include additional components than the selected ones shown.

<sup>1</sup>Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

## Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

### CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200, 990-8203) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1(112)800-667-3524
Alberta	1-800-222-6400
British Columbia (South and Central)	112-800-663-1551
Yukon and Northern B.C. (area served by Northwest Inc.)	Zenith 0-8913
Northwest Territories (area served by Northwest Inc.)	Zenith 2-2015

## How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

## Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

*CANSIM Main Base Series Directory, 1984* — \$75.00 Canada, \$90.00 other countries

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

*CANSIM Mini Base Series Directory, Catalogue 12-569* — \$16.70 Canada, \$20 other countries.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

*CANSIM-Cross Classified Data Base Index* — \$7.

This index provides a summary of available data on the Cross Classified Data Base.

*CANSIM-Cross Classified Data Base Directory* — \$20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

## Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

- I.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
- R.E. Drover — Director, Corporate Assignments Division
- B.J. Lynch — Director General, Operations Branch
- R. Platek — Director, Census and Household Survey Methods Division
- M. Podehl — Director, CANSIM Division
- G.J. Brackstone — Director General, Methodology Branch

- A. Meguerditchian — Director, International and Financial Economics Division
- L.O. Stone — Senior Advisor, Population Studies
- P.N. Triandafillou — Director, Agriculture Statistics Division
- K. Lal — Director General, System of National Accounts Branch
- D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

## Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation,

are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

## Gross National Product

### Third Quarter 1984 Advance Information

Gross National Product rose 1.4% in the third quarter of 1984 to a level of \$425.4 billion, seasonally adjusted at annual rates. After allowing for a 0.5% decline in overall prices, real GNP increased 1.9%, more than double the 0.8% average increase of the first two quarters. Available monthly evidence suggests that most of the growth occurred early in the quarter. Real GNP, which completed its recovery in the fourth quarter of 1983, has since expanded 3.6% beyond its pre-recession peak in the second quarter of 1981.

About half of the strong growth in economic activity in the third quarter was due to increased real net exports of goods. Gross fixed capital formation contributed about one-fifth of the growth and advanced in all its major components. Personal expenditure rose marginally while the level of inventory accumulation was essentially unchanged. On the income side, most of the strength came from labour income as profit growth was weak for the second successive quarter. The fall in the implicit price index for GNE reflected declines in some prices and weight-shift effects among exports. More indicative of price movements in the domestic economy was the moderate 0.8% increase in the implicit price of final domestic demand.

Real merchandise exports rose 8.6% in the third quarter, following a marginal increase in the second quarter. This strength was most notable in motor vehicles and parts, but there was also considerable growth in wheat, woodpulp, lumber, newsprint, aircraft engines and parts and some electrical equipment. Merchandise imports, which also rose marginally in the second quarter, recorded a 5.3% growth in the third. As was the case in exports, motor vehicles and parts again predominated and there were, as well, increases in industrial machinery and crude and fabricated metals. The relatively greater increase of goods exports caused the real merchandise balance

to increase \$1.5 billion from the second quarter, half of which was auto-related. Because of a sharp decrease in the terms of trade the nominal merchandise trade balance<sup>1</sup> did not increase but rather fell \$0.2 billion to \$21.5 billion at annual rates. This was offset by a small improvement in the non-merchandise deficit so that the surplus on both goods and services increased to \$1.9 billion from \$1.7 billion in the second quarter.

Following a small decline in the second quarter, real business spending on plant and equipment continued its slow recovery in the third quarter, and is still 19% below the pre-recession peak in the second quarter of 1981. Non-residential construction spending grew 1.9% following a 3.0% increase in the previous quarter. In the absence of major construction projects, building activity continues to be supported by a myriad of small and medium-sized projects. Exploration and development activity also advanced. Real expenditure on machinery and equipment increased after a decline in the second quarter.

Real residential construction activity grew a modest 1.0% in the third quarter following the previous quarter's 2.2% advance. Construction of new single detached dwellings led the growth as starts of these units increased by more than 10% in the quarter. Offsetting this strength was reduced building activity of apartments and lower real estate commissions generated in the market for resale housing.

Concurrent with the lack of growth in personal disposable income, the volume of expenditure on goods and services increased fractionally in the third quarter. Personal spending thus contributed about 8% to the growth of GNP in contrast to an average contribution of almost 50% in the previous six quarters. The

<sup>1</sup> These estimates are presented in greater detail in the Balance of Payments information bulletin released November 30, 1984.

sources of weakness were declines in outlays on durable goods (down 1.2%) and on semi-durable goods (down 0.4%). Lower spending on durables was mainly in household furniture, appliances and new passenger cars. Clothing and footwear accounted for the bulk of the decline in semi-durables spending. Expenditure on non-durables rose 0.8% following three quarters of declines or marginal growth while spending on services also rose 0.8%.

The rate of non-farm business inventory accumulation of \$1.3 billion in the third quarter was about the same as in the second quarter. However, within the total, the slide in the rate of non-durable goods build-up offset the surge in durable goods inventories. The higher durable goods inventories were concentrated in retail and wholesale trade, reflecting weak final domestic demand and strong import growth. At the manufacturing level, durable goods inventories rose only moderately and may have reflected the sharp increase in exports. The moderate inventory accumulation together with the stronger growth in the economy moved the aggregate stock-to-sales ratio down further, a continuation of the steep decline emerging in recent years.

There was a decumulation in farm inventories, including grain in commercial channels; liquidations in grain stocks, reflecting export demand, was partially offset by accumulations of livestock.

The implicit price index for GNE has been distorted in the quarter by weight-shift effects among exports. If these effects are discounted, overall prices appear to have risen about 0.4%, compared to the 0.5% decline currently shown for the GNE implicit price index.

The implicit deflator for final domestic demand, a measurement more reflective of price movements in the domestic economy, increased 0.8% in the third quarter and the growth continued to decrease to 3.7% on a year-over-year basis. Of note are recent moderations in construction prices.

On the income side, labour income rose 1.9% in the third quarter, basically unchanged from the rate of growth in the previous quarter. Much of the increase reflected a 1.0% advance in employment. Personal disposable income was virtually unchanged in the quarter, as dividend payments declined and income tax collections rose sharply. As a result the personal savings rate fell from 13.8% in the second quarter to 12.7% in the third. There was little change in corporation profits before taxes. Profits of industrial corporations continued to grow slowly while those of financial corporations recorded a second consecutive decline. The profit share of GNP has fallen slightly in the past two quarters and currently stands at 9.3%, considerably below the share maintained throughout most of the 1970's.

The government sector deficit, on a national accounts basis, decreased \$3.1 billion to a seasonally adjusted rate of \$26.1 billion in the third quarter. Government revenues advanced 3.4%, mainly due to higher personal direct taxes. The increase in total expenditure was 1.4% and reflected increased payments on the public debt, spending on goods and services and transfers to persons.

For further information, contact B. Clift (613-990-9158), Gross National Product Division, Statistics Canada, Ottawa, K1A 0T6.

Gross National Product at market prices rose 1.4% in the third quarter of 1984 to a level of \$425.4 billion seasonally adjusted at annual rates. Real GNP increased 1.9%, up from the 0.8% growth of the second quarter.

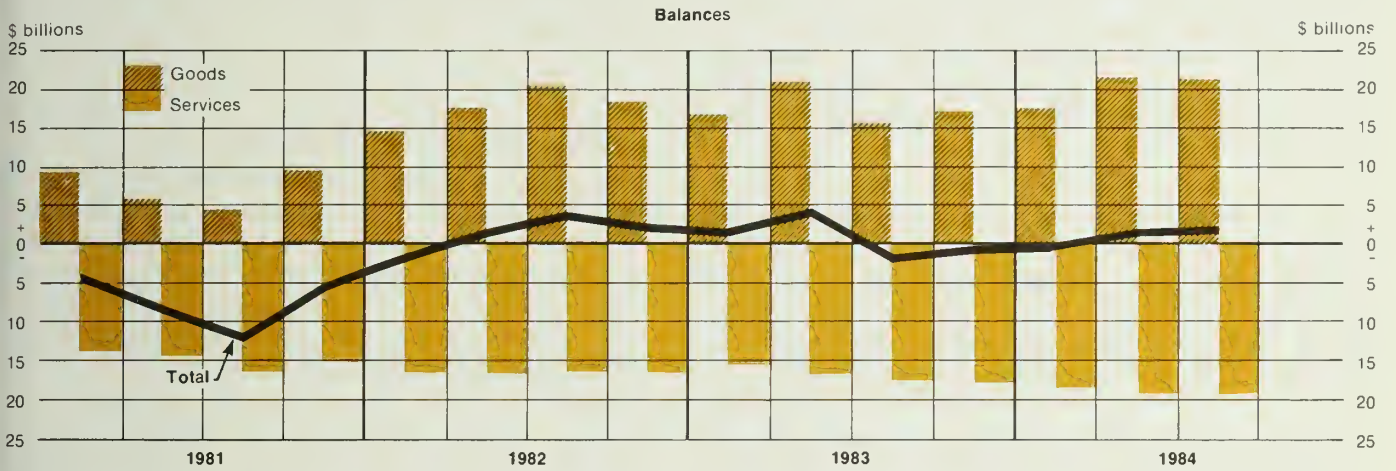

Wages, salaries and supplementary labour income and military pay and allowances rose 1.9%, virtually unchanged from the rate of increase in the second quarter. There was little change in corporation profits before taxes while interest and miscellaneous investment income fell 4.9% in third quarter of 1984

Note: All quarterly data adjusted for seasonal variation and at annual rates

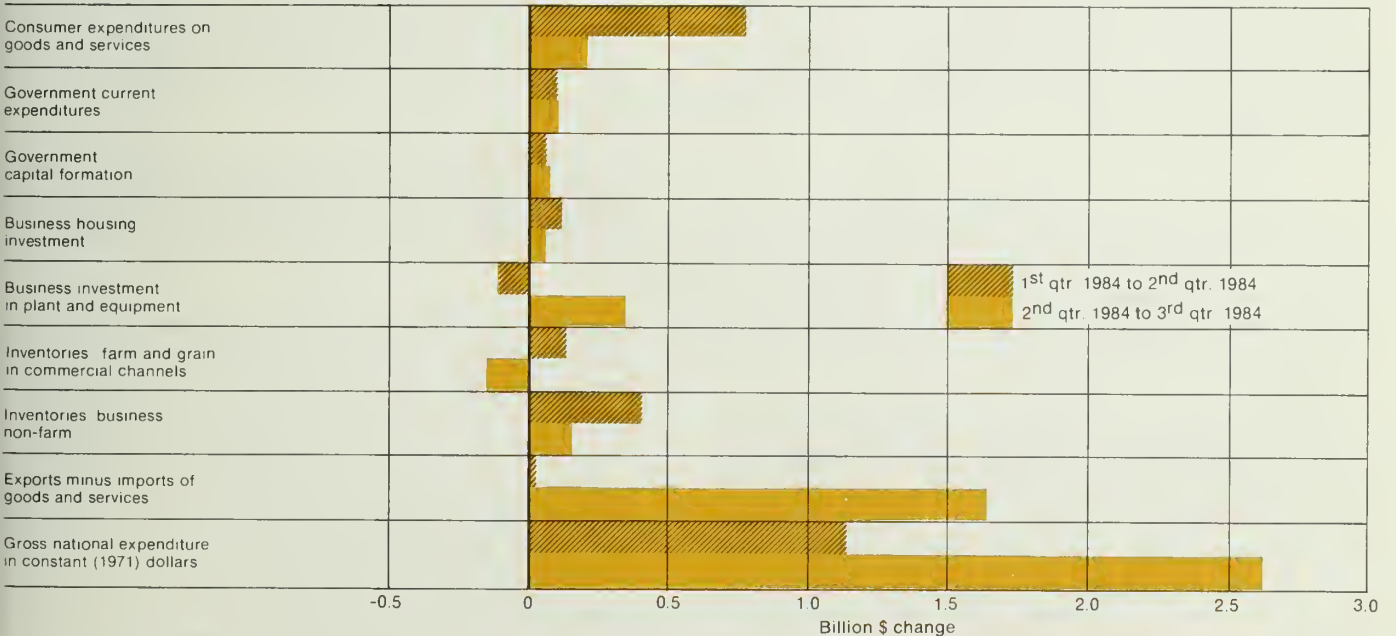

Exports and Imports of goods and services each grew 5.9%. The nominal merchandise trade balance fell \$0.2 billion to \$21.5 billion at annual rates.

About half of the growth in economic activity was due to increased real net exports of goods. Real residential construction grew a modest 1.0%; as well, real business spending on plant and equipment continued its slow recovery in the third quarter. Personal expenditure rose marginally while the level of inventory accumulation was virtually unchanged.

(Quarterly changes in GNE and components in constant (1971) dollars)

Note: All quarterly data adjusted for seasonal variation and at annual rates

## Observations

### Small-Area Income Data - 1982

Five issues of *Income estimates for subprovincial areas*, Catalogue No. 13-576, covering the years 1976 to 1981, have been published over the last couple of years. A report under the same title and catalogue number, covering the 1982 income year, was released in December 1984.

Data are published for counties or census divisions (CD's) and for subprovincial regions (SPR's). For the first time, data in the cited publication are also shown for census metropolitan areas (CMA's) as subunits of SPR's. Reference maps showing the delineation of CD's and SPR's are also included in the report.

Aggregate money income and its components are shown for CD's, SPR's and CMA's. The income components are: wages and salaries, self-employment income, government transfer payments, investment income and rent, and miscellaneous income. The first two components yield employment income, the other three components form non-employment income, and all five components constitute money income before tax. Aggregate income tax and money income after tax are also supplied.

In addition to income aggregates, per-capita money income before and after tax, as well as per-capita tax are published for all geographic units. The report also contains some measures facilitating analysis of income levels and growth rates experienced by these small areas over the period 1980 to 1982.

Copies of *Income estimates for subprovincial areas - 1982*, Catalogue No. 13-576, may be purchased from local authorized agents, through the local Statistics Canada offices, or by mail order from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6. Any order placed with Statistics Canada local offices, or with the Ottawa head office, should be accompanied by a cheque or money order payable to

the Receiver General for Canada to cover the selling price of \$6.65 for Canada, or of \$7.95 for other countries.

### Market Analysis Made Easier

Marketing specialists are now expected to make sound decisions in an increasingly complex market environment. An invaluable tool of their trade is Statistics Canada's *Market Research Handbook*, the most comprehensive array of Canadian marketing information available in a single volume, consisting of about 900 pages, 272 tables and 49 charts.

The new 1984 edition is now available, bringing together an even wider range of updated statistical information, including the latest from the 1981 Census.

Whether you are a businessman or a market analyst in a large corporation, the *Market Research Handbook 1984* contains a wealth of information at your fingertips.

Information in the *Handbook* can help you evaluate your own market position, identify consumer markets, forecast sales levels, plan advertising campaigns, etc.

Key data series include the consumption of Canadian goods and services, employment, incomes and merchandising and services trades. For local market analysts, many of these series, as well as Census of population and household data, are available for 59 major urban markets, representing more than 60 per cent of Canada's population. Projections of population, family and household growth, as well as international comparisons, are also included. Significant developments in the market place are highlighted through the use of graphics for easy identification.

You can purchase your copy of the *Market Research Handbook, 1984*, Catalogue No. 63-224 for \$33.35 a copy in Canada or \$40.00 elsewhere. To order, send cheque or money order payable to the Receiver General for Canada to Publication Sales and Services, Statistics Canada, Ottawa, Ontario, K1A 0T6.

For further information, contact Maurice Massaad (613) 990-9656, Merchandising and Services Division, Statistics Canada, Ottawa.

<sup>1</sup>In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency (units), Building Permits (dollars), and Mortgage Loan Approvals (number). <sup>2</sup>Composite Index of Housing Starts (units). <sup>3</sup>Deflated by the Consumer Price Index. <sup>4</sup>Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

## Section 2 · Population Statistics

- 14 1. Population by Province
- 14 2. Immigration to Canada, by Country of Last Permanent Residence
- 15 3. Immigration to Canada, by Province of (Intended) Destination
- 15 4. Immigration to Canada, by (Intended) Occupational Group
- 16 5. Births, by Province
- 16 6. Deaths, by Province
- 16 7. Marriages, by Province

<sup>1</sup>As of the first of each month. Quarterly and annual data from 1951 to April 1, 1981 are intercensal estimates; final postcensal estimates from July 1, 1981 to April 1, 1982; updated postcensal estimates from July 1, 1982 to October 1, 1983 and preliminary postcensal estimates for January 1984. For an explanation of population estimates methodology and data sources see catalogue (91-201) and (91-001). <sup>2</sup>These estimates have been modified due to a revision in the number of births for January to December 1983. Sources: Quarterly Estimates of Population for Canada and Provinces (91-001), Annual Estimates of Population for Canada and Provinces at June 1st (91-201), Statistics Canada.

<sup>1</sup>The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. <sup>2</sup>Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. <sup>3</sup>Includes logging, fishing, trapping and hunting. <sup>4</sup>Includes mechanical and construction. <sup>5</sup>Includes a small number in non-specified occupations. <sup>6</sup>Beginning with 1978 includes fiancés and fiancées. <sup>7</sup>Does not include students entering Canada on students' visas. <sup>8</sup>Includes also retired persons, elderly dependents, and other unspecified persons.

## Section 3 • System of National Accounts

### 1. Income and Expenditure Accounts

- 8 1.1 National Income and Gross National Product
- 8 1.2 Gross National Expenditure
- 9 1.3 Gross National Expenditure, Constant Dollars
- 9 1.4 Sources of Personal Income
- 10 1.5 Disposition of Personal Income
- 10 1.6 Sources and Disposition of Gross Saving
- 11 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
- 15 1.8 Implicit Price Indexes, Gross National Expenditure
- 15 1.9 Relation between Gross National Product at Market Prices and  
Gross Domestic Product at Factor Cost

### 2. Domestic Product by Industry

- 16 2.1 Gross Domestic Product by Industry of Origin, Quarterly
- 17 2.2 Gross Domestic Product by Industry of Origin, Monthly

### 3. Balance of International Payments

- 18 3.1 Canadian Balance of International Payments, Current Account, All Countries
- 18 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
- 18 3.3 Canadian Balance of International Payments, Capital Account, All Countries

<sup>1</sup>Excludes profits (net of losses) of government business enterprises. <sup>2</sup>Includes the withholding tax applicable to this item. <sup>3</sup>Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. <sup>4</sup>Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. <sup>5</sup>Includes net income of independent professional practitioners. <sup>6</sup>See footnote 4, Table 1.2

<sup>1</sup>Includes defence expenditures. <sup>2</sup>Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. <sup>3</sup>Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. <sup>4</sup>The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1) <sup>5</sup>See footnote 4, Table 1.1.

<sup>1</sup>The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

<sup>1</sup>Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. <sup>2</sup>Tax liabilities. <sup>3</sup>Withholding taxes. <sup>4</sup>The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

<sup>1</sup>These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.  
For source see Table 1.9.

<sup>1</sup>The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. <sup>2</sup>The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

<sup>1</sup>Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

<sup>2</sup>The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. <sup>3</sup>The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. <sup>4</sup>The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. <sup>5</sup>Includes publishing and allied industries. <sup>6</sup>Includes storage and communication industries.

## Section 6 • Manufacturing

- 68 1. Total Inventories, Shipments and Orders in Manufacturing
- 69 2. Manufacturing Shipments by Industry
- 71 3. Manufacturing Inventories by Industry
- 73 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
- 74 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
- 75 6. Estimated Value of Goods in Process and finished Products by Economic Use Classification
- 76 7. Tobacco and Beverages
- 77 9. Footwear
- 78 10. Production of Sawn Lumber
- 78 11. Pulpwood, Wood Pulp and Newsprint
- 79 12. Primary Iron and Steel
- 30 13. New Motor Vehicles
- 31 14. Production of Motor Vehicles in Canada
- 32 15. Refrigerators, Freezers, Washing Machines and Clothes Dryers

Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)<sup>1</sup>

Annual average and month	Inventory at end of month									
	Shipments <sup>2</sup>	New orders received during month <sup>3</sup>	Unfilled orders at end of month	Owned <sup>4</sup>	Held but not owned	All inventory held				Ratio of inventories owned to shipments
						Total	Raw materials	Goods in process	Finished products

<sup>1</sup>Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. <sup>2</sup>Shipments of goods manufactured within the establishments. <sup>3</sup>Total new orders received during the period at estimated selling value, net of cancellations. <sup>4</sup>Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

<sup>1</sup>Total inventories owned by manufacturers including warehouse stocks.  
 Note: All series are subject to revision each year when more recent Census of Manufactures data become available.  
 Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 4: Estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Shipments <sup>1</sup>							Unfilled orders at end of month						
	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export-based industries	Supplementary classification: automotive products

<sup>1</sup>Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Inventories owned							Inventories held raw materials						
	Consumer goods		Machinery and equipment	Con-struction materials and components	Other inter-mediate goods & supplies	Export-based industries	Supple-mentary classification: automotive products	Consumer goods		Machinery and equipment	Con-struction materials and components	Other inter-mediate goods and supplies	Export based industries	Supple-mentary classification: automotive products

<sup>1</sup>Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. <sup>2</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. <sup>3</sup>Customs exports. <sup>4</sup>Mill shipments destined for export.

<sup>1</sup>Data compiled according to the Steel Distribution Index revised January, 1964. <sup>2</sup>Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. <sup>3</sup>Excluding shipments for re-processing at maker's own plant. <sup>4</sup>Data compiled as submitted by the steel producers according to the steel industry distribution code.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

<sup>1</sup>Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc.<sup>2</sup>Gross new production by field less field flared and waste.<sup>3</sup>Includes crude oil, condensate and pentanes.

Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

<sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

<sup>1</sup>Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. <sup>2</sup>The major groups include additional components than the selected ones shown.

## Section 11 - External Trade

### 1. Merchandise Trade on a Balance of Payments Basis

- 08 1.1 Total Exports by Major Trading Area and Section,  
Seasonally Adjusted, Balance of Payments Basis
- 1.2 Imports by Major Trading Area and Section, Seasonally  
Adjusted, Balance of Payments Basis
- 09 1.3 Price and Volume Indexes of Total Exports by Section,  
Seasonally Adjusted, Balance of Payments Basis
- 1.4 Price and Volume Indexes of Imports by Section,  
Seasonally Adjusted, Balance of Payments Basis
- 10 1.5 Total Exports by Commodity Grouping, Seasonally  
Adjusted, Balance of Payments Basis
- 12 1.6 Imports by Commodity Grouping, Seasonally Adjusted,  
Balance of Payments Basis

### 2. Merchandise Trade on a Customs Basis

- 14 2.1 Total Exports by Country, Not Seasonally Adjusted, Customs Basis
- 15 2.2 Imports by Country, Not Seasonally Adjusted, Customs Basis
- 16 2.3 Total Exports by Commodity Grouping, Not Seasonally Adjusted,  
Customs Basis
- 18 2.4 Imports by Commodity Grouping, Not Seasonally Adjusted,  
Customs Basis

<sup>1</sup>Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). <sup>2</sup>The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). <sup>3</sup>For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

<sup>1</sup>Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

<sup>1</sup>This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. <sup>2</sup>Seasonally adjusted data for Saskatchewan is not available. Source: Cheques Cashied (61-001), Statistics Canada.
